

Facilities Overview

Datanational Corporation is housed in a state-of-the-art facility within a Technology Park in Farmington Hills, Michigan. Our facility is equipped with world-class fiber optic connectivity to one of the world's most advanced and reliable IP-Optimized Networks. In order to deliver this standard of service, Datanational has developed a partnership with Level 3 Communications to deliver bandwidth and infrastructure capable of expansion to 10GB per second.

For our clients' businesses, Datanational Corporation dedicates a portion of our facility for Business Continuity and Recovery Services. We provide a secured and alarm-equipped location with 24/7 monitoring and surveillance. Our facility is equipped with on-site power generation backed up by redundant UPS systems. We maintain private office space within our location dedicated to Business Continuity and Recovery Services. This private office space includes work areas with network connectivity, phones, fax machine, laser and ink jet printers and even PC's, when necessary.

Datanational's raised floor data center provides continuously conditioned power to highly efficient environmental controls for housing of your systems in optimal conditions to ensure their peak performance. We provide managed PC servers and IBM System i systems, which are monitored on a 24/7 basis by qualified IT specialists.

Professional Support

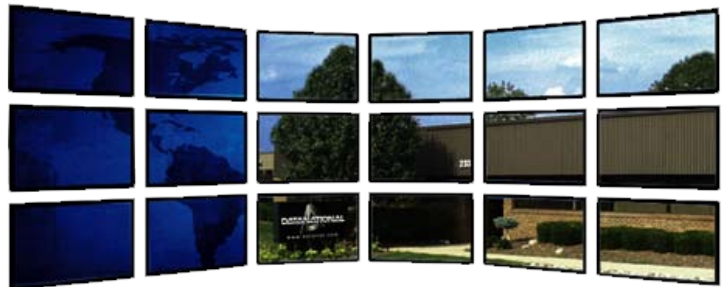

Datanational Corporation's superior location and environment are only exceeded by our level of professional support. Datanational's professional support personnel provide 24/7 support during a recovery exercise or declared outage. Our Certified Network Specialists provide system connectivity/configuration and support to facilitate the success of your recovery testing, and if necessary, emergency support for your declared outage. We provide expertise in the configuration and operations support for i5/OS, Windows, and Linux Operating Systems.

Datanational's unique System Restoration Services are available for system recovery exercises or a declared outage. This unique service offering means there is no need to leave the IT helm while your company is in a state of emergency. We will restore your system while you remain remote with your team to facilitate operations and recovery of the business while we manage and host the systems.

Experience

Datanational's System Restoration Services are delivered by a group of experienced individuals who currently provide 24/7 Systems Management and Hosting support for global ERP and eBusiness Applications. We currently support users running mission critical applications in Asia, Europe, and North America.

Datanational now offers to our clients redundant co-location capacity for High Availability and System Management and Hosted Solutions. These Datanational-leased facilities provide world class IT sites throughout North America and Europe to spread the risk across multiple geographies for our High Availability and System Hosting Solutions.
